

Contrail®

Flexible Deployment Options to Manage All of Your Hydrologic Data in One Place

More and more organizations are realizing the benefits of combining on-site and hosted Contrail software deployment options. With Contrail, you have three flexible options. Whether to host your own solution on-site, we host it for you (or combination of both), or choosing our software-as-a-service option, OneRain's team of experts will help you assess which deployment solution achieves the highest availability and resiliency for your mission-critical operations. It's good to have options.

Highly Scalable Enterprise Software

Contrail supports the data collection, processing, archiving and dissemination of water resources data collected from your own local ALERT/ALERT2™ gauge sensor network together with federal and state agency data sources such as USGS, METAR, Tides, HADS, RAWs, RWIS, satellite and many other platforms. Users have secure web access to real-time and historical data via their desktop or mobile device. At Contrail's core are its advanced alarm management and notification capabilities.

OneRain's Contrail is designed to be a highly scalable enterprise level software solution hosted on servers and accessed via the Internet to provide simultaneous functionality, management, administration, and services to a large number of users no matter where they are.

DEPLOYMENT OPTIONS

- **Contrail Base Station**—licensed Contrail Enterprise software that runs on-premise on your own servers.
- **Contrail Server**—a OneRain-hosted server resource for Contrail.
- **Contrail Web**—the software as a service (SaaS) edition of Contrail.

Experts measuring rainfall and its consequences™

Understanding Contrail® Deployment Options

1

Contrail Base Station—you license our Contrail Enterprise software and run the application on your own servers. Includes Contrail Analytics and Contrail Inventory *Plus*, and enables you to collect as many data sources and create as many web site views as you require to meet all your users' needs.

2

Contrail Server—a OneRain-hosted virtual server resource running the full version of Contrail Base Station software in our secure industrial data center. Contrail Server is OneRain's managed and hosted application service edition of Contrail that delivers the full feature set of Contrail Base Station (includes Contrail Analytics and Contrail Inventory *Plus*). Fixed subscription cost allows you to extend and load it with as many data sources, web views, custom reports, etc., as you require.

3

Contrail Web—the software as a service (SaaS) edition of Contrail in which we offer you a slot in our multi-tenant enterprise and you administer it for your users. This is a “pay as you go” subscription model to add more web views and sensor data sources.

Features	Contrail Base Station	Contrail Server	Contrail Web
Web Accessible Software	√	√	√
Mobile Access (smartphone, tablet...)	√	√	√
Web Styling and Custom Branding	√	√	√
Web Content Management	√	√	√
File and Image Management	√	√	√
Bookmarks	√	√	√
On-site Mission Critical Database	√		
Hosted Service		√	√
Processing and Performance	√	√	
Configuration	√	√	
Reload Metadata – Immediate Updates	√	√	
Unlimited Sensors	√	√	+
Role Based User Privileges	√	√	√
Multi-Year Data Queries	√	√	
Multi-Time Zone Support	√	√	√
Multi-Sensor Alarms	√	√	√
Notifications (one alarm, multiple deliveries)	√	√	√
Map View with Layers	√	√	√
Unlimited Custom Maps	√	√	+
Rain Gauge Display	√	√	√
Optional Rainfall Overlay	√	√	√
OneRainware™ Radar Rainfall Displays	√	√	√
Graphing (date selection and real-time mode)	√	√	√
Sensor Data Export (MS Excel / CSV)	√	√	√
Data Editing (with audit trail)	√	√	√
Data Revalidation (with audit trail)	√	√	√
Real-Time Data Validation	√	√	√
Incoming Raw Data Viewer	√	√	√
Automated and Manual Data Entry	√	√	√
Equation Support	√	√	√
Ratings Tables (with bulk upload)	√	√	√
Bulk Site and Sensor Configuration	√	√	√
Synthetic Sensors	√	√	√
Online Reports	√	√	√
Custom Online Reports	√	√	√
Public Web Site Option	√	√	+
Read Only Server Option	√	√	√
Server Replication	+	√	√
Multi-Client (first 5 client web sites)	√	√	√
Additional Client Licenses	+	√	+
Data Collectors / Control			
Serial to TCP / IP Connection Options	√	√	√
