

OneRain Incorporated – Job Description

Title:	Java Backend Developer
Reports to:	General Manager
Location:	Longmont, Colorado
Job Type:	Full-time, Salaried Position
Hiring Range:	\$85,000 - \$100,000

Job Summary

Our growing team is seeking to add a colleague who will participate in software development with a focus on providing our production systems the dedicated professionalism required for our customers to succeed. We are looking for a back end Object Oriented developer with experience using Java to build high performing, scalable, enterprise level applications. The position will also provide support for other backend operations and Continuous Integration processes. This person will be participating in maintaining the code base, as well as developing new features or applications for the efficient, successful production of high-quality data and analytics that are then used for projects of vital importance, including regulatory compliance, flood management, forensic and legal processes, and other high value applications related to water and environmental management.

Duties and Responsibilities:

- Enhance existing software tools and build new ones to improve our products
- Manage and process environmental data to produce high quality datasets
- Explore and develop new methodologies and processes to improve data collection, visualization and analytics capabilities
- Define technical impacts, recommend best-practice and/or alternate approaches and provide timeline estimates
- Participate in requirements and solution design sessions, working closely with stakeholders from across the entire organization
- Lead collaboration projects with AEM partner companies to develop and support new data collection and transmission solutions
- Support and deploy servers on Amazon Web Services (AWS)
- Assist in the development of junior team members through training and mentoring
- Document features and functions of our software and data services
- Test our software and its functionality
- Clearly and regularly communicate with management and technical support personnel
- Participate in bug reporting, tracking and resolution
- Participate in on-call rotation to support our production systems

Knowledge, Skills and Abilities:

- Able to see the big picture and takes responsibility for pursuing the details necessary to create the larger desired outcome
- Skilled at creating solutions that address industry and customer issues effectively and cost-efficiently
- Solves problems by breaking down larger problems into manageable pieces
- Ability to debug production issues across systems and the stack
- Experience in designing and building systems to operate at scale
- Strong written and verbal skills
- Communicates technical concepts effectively, with both technical and non-technical people
- Is willing and able to work with existing code
- Is open to learn new approaches, computer languages and technologies.
